

C247DL

Dual-link DVI To Apple LED Cinema Display 27-inch

- Exclusively for Apple LED Cinema Display 27-inch
- USB audio and pixel perfect resolution
- Works with the built-in iSight camera

Made for LED Cinema 27-inch displays

Get a marvelous visual experience with a **2560x1440** resolution on your Apple LED Cinema 27-inch display – beyond just graphics and multi-media lies the sharper images, vibrant colors and life-like video.

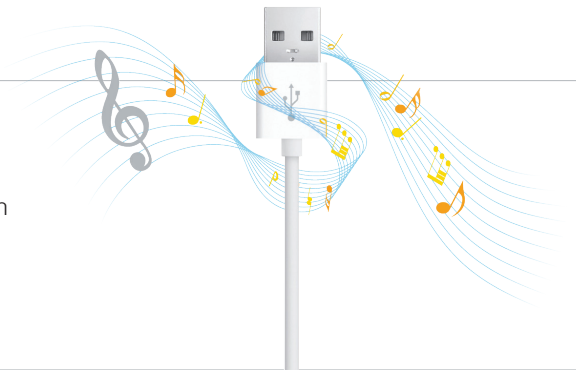

See for Yourself

Stunning view from any angle with the built-in iSight camera from your Apple Cinema Display for video-conferencing or just take pictures using the Photo Booth application.

Stunning Audio through USB

Since DVI does not support audio, the C247DL transfers audio via USB to the built-in speakers of the Apple LED Cinema Display. Now you can watch and listen to your favorite movies, songs, or just video-chat with friends and family.

Have a blast with your past Macs

Dust off that old Mac. The C247DL is here to rejuvenate your Mac experience by actively converting the DVI signal into a razor sharp 2560x1600 resolution. Now you can connect your 2006 – early 2008 MacBook Pro, 2005–mid and 2007 Mac Mini to the new Apple Cinema Display with Mini DisplayPort input.
